---

## Summary

Fauzan is currently a Master's student of Data Science in Health at the University of California, Los Angeles, supported by the Fulbright scholarship. Proven track record in building scalable data pipelines, experimentation, and analytics products for early-stage startups and large-scale tech companies, from e-commerce to fintech.

## Technical Skills

- Programming language: Python, R, SQL, SAS
- Data engineering tools: Google Cloud Platform (BigQuery, Cloud Run, PubSub), Amazon Web Services (RDS), Airflow, DBT, GitHub/git, Docker
- BI tools and product analytics: Metabase, Looker Data Studio, Tableau, Mixpanel, Shiny R, Streamlit
- Data Science and AI: Machine Learning, RAG for LLMs (Large Language Models)
- Biostatistics: Survival analysis, Longitudinal data analysis

## Education

**University of California, Los Angeles (UCLA)** Sep 2025 - Jun 2027 (Expected)

Master's Data Science in Health (GPA of 3.75)

- Relevant courses: Biostatistics, Data Management and Statistical Computing in SAS, Data Science in R and Python, Statistical learning (Machine learning)

**University of Indonesia** Aug 2013 - Dec 2019

Bachelor's of Public Health, Epidemiology (GPA of 3.42)

- Relevant courses: Data Analysis in SPSS, Hospital Information System Management

## Data Analytics Experience

**Data Lead, Segari** Jul 2024 - Sep 2025

- Led data engineering & analytics supporting product, marketing, and operations, reporting to CTO
- Build and present automated root cause analysis for supply chain issues, maintaining product wastage below 2% week-on-week
- Designed and analyzed experiment (A/B tests) of product features (e.g., pricing, delivery), increasing revenue while sustaining VIP retention
- Improve data pipeline efficiency by releasing health reports, alerts, governance, and targeted optimization that achieves a reduction of processing time by 70% and cloud cost by 40% in 6 months
- Maintain product recommendation system (machine learning) to improve users' product discovery
- Manage end-to-end ETL data infrastructure in the company (datalake, data warehouse, and datamart)
- Build data ingestion pipelines from multiple products and marketing platforms (Mixpanel, Airbridge)
- Delivered analytics products to support new initiatives (e.g., offline store expansion)
- Taught high-performance SQL to the analysts across business units

**Senior Data Analyst, Paper.id** May 2023 - Jul 2024

- Mentors and guides junior data analyst members of best practices, supports across the B2B digital payment platform fintech company, including CPO, commercial, products, and ops
- Built OKR monitoring dashboards for management and automated analytics platforms (including ETL pipeline) to identify high-value untapped users, reducing manual work and increasing monetization
- Create and present reports for OKR tracking and campaign performance (e.g., co-branded credit card)

**Business Intelligence Data Analyst, Tokopedia** Jul 2019 - Apr 2023

- Delivered analytics products to support stakeholders managing app for 100M+ users and 9M sellers; supporting a later-stage startup to the IPO; awarded “Growth Mindset” (top among 100+ analysts)
- Automated financial and operational reporting by building self-service analytics products via dashboards, alerts, and segmentation tools using Tableau and R Shiny
- Built ETL data ingestion pipelines and queries using BigQuery and Airflow
- Built monitoring dashboards and alerts, and conducted cost optimization, governance, and audit readiness initiatives to improve analytics adoption to 90%+ and reduce ETL costs by 7%+

#### Data Analyst, Kulina

Jul 2018 - Jul 2019

- Reported company-wide performance for an early-stage startup (OKRs & key metrics) to the CEO and COO, driving decisions across product, supply, logistics, sales, and marketing
- Built analytics dashboards (Data Studio, Redash), delivered ad-hoc insights (BigQuery SQL, Tableau), and contributed to building a new data warehouse and automated ETL pipelines (GCP), integrating multi-source data (DBs, spreadsheets, web tracking)

### Selected Course and Certification

|      |                                                                                                                                                                                      |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2025 | Image processing pipeline, Parallel computing for research, Retrieval Augmented Generation LLMs, AI Agents, RNA Sequence, Spatial Transcriptomics in R, and LLM for Genetics by UCLA |
| 2025 | Cloud computing in AWS, by Amazon                                                                                                                                                    |
| 2024 | Mathematics for Machine Learning (Linear Algebra and Calculus) by Imperial College London                                                                                            |
| 2024 | Data Science in Stratified Healthcare and Precision Medicine by the University of Edinburgh                                                                                          |
| 2024 | Health Informatics by Johns Hopkins University, at Coursera                                                                                                                          |
| 2023 | Generative AI using Google Cloud by Google                                                                                                                                           |
| 2023 | Data Engineering and Data Warehousing on Google Cloud by Google                                                                                                                      |
| 2020 | Tableau Desktop Specialist certified by Tableau                                                                                                                                      |

### Organization and Voluntary Activities

|            |                                                                                                 |
|------------|-------------------------------------------------------------------------------------------------|
| 2025-2028  | Vice Head of Public Health, University of Indonesia Alumni Association, on Digital and AI       |
| 2025       | Industry professional mentor at AI Hackathon by DataX University of California, Los Angeles     |
| 2022, 2025 | Data Science Mentor at Career Mentorship Program by Rumah Kepemimpinan                          |
| 2020       | Data Analysis, Tableau, R Instructor at Epidemiology and Biostatistics, University of Indonesia |
| 2020       | Data technical support for the Crisis Center of the Ministry of Health COVID-19 Task Force      |

### Selected Projects

Chronic Disease and Physical Inactivity Epidemiology Model Explorer May 2026

- Built an interactive Dash application utilizing the CDC BRFSS dataset to analyze how Social Determinants of Health (SDOH) influence physical inactivity within populations with chronic conditions. [GitHub](#) | [Dashboard](#)
- Deployed the app on the Google Cloud Run, which allows users to do cohort building (by chronic condition, BMI, sex, and income), choose SDOH predictors, train, and then evaluate ML models
- Integrated an automated Gemini AI to generate narrative insights of the resulting model, identify key risk drivers, and give public health recommendations based on the model results

Predicting 30-Day Readmission After Cardiac Surgery Using MIMIC-IV Dataset Mar 2026

- Build a data pipeline from the Electronic Health Record Physionet BigQuery, consisting of multiple datasets (500 million rows and 50 GB), including hospital admission, ICU vitals, labs, and EKG. [Github](#)
- Run and evaluate different prediction models in R, achieving AUCs of 0.65. [Report](#)
- Develop and present a Shiny exploratory dashboard for cohort EDA, hyperparameter tuning, admission-discharge-transfer (ADT) analysis, and historical ICU vitals plots. [Dashboard](#)
